

## HOW TO RUN THE VC++ COMPILER

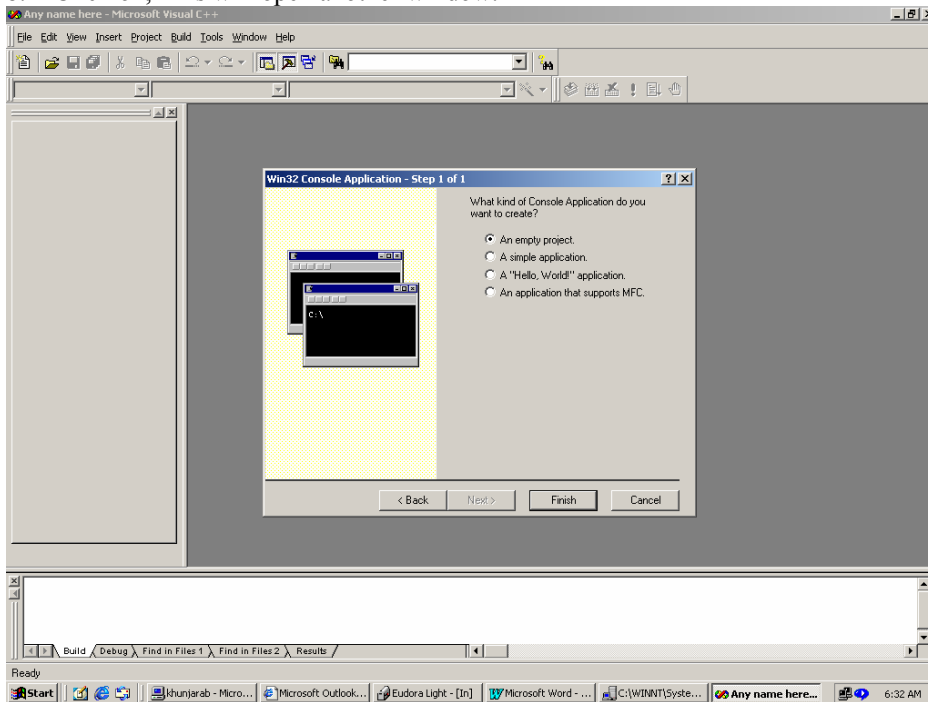

1. Click on **start**
2. Go Programs\Microsoft Visual Studio\Microsoft Visual C++ 6.0 (this should open up the VC++ environment)

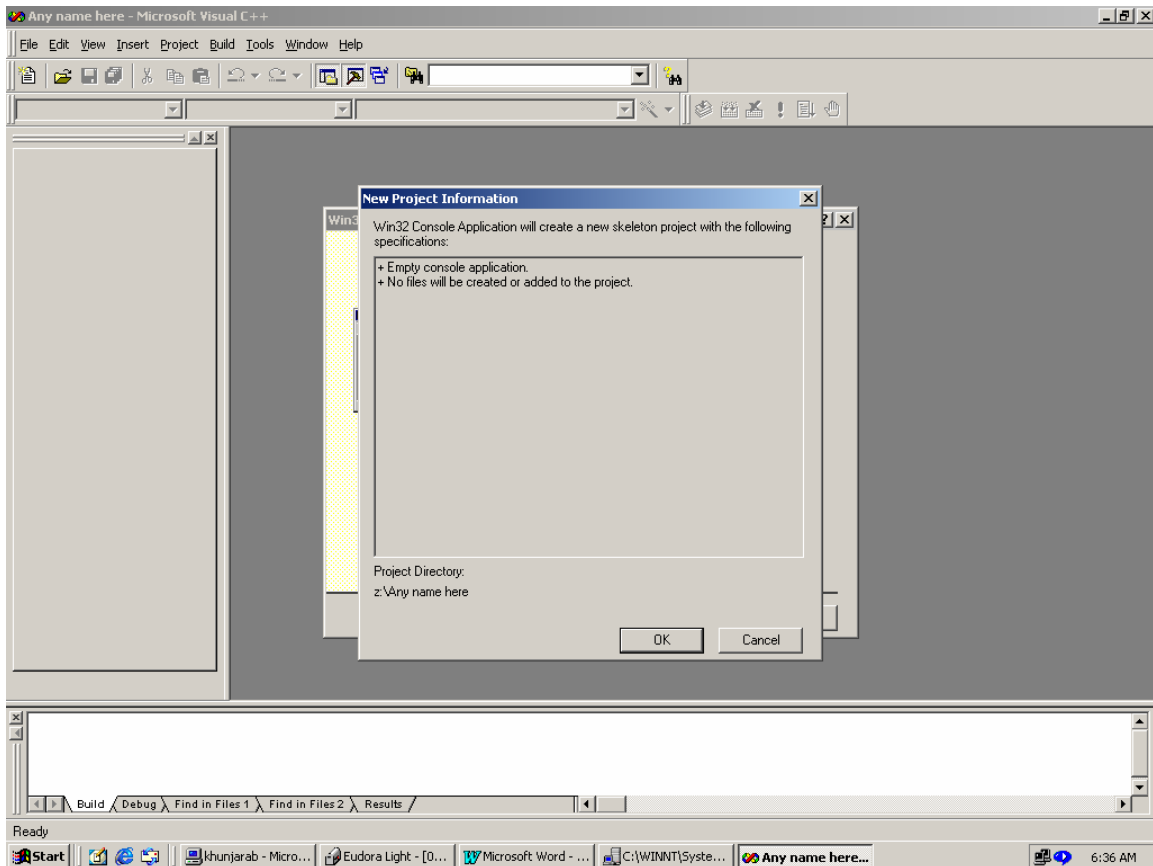

3. Go to 'file/new' (this will open another window)

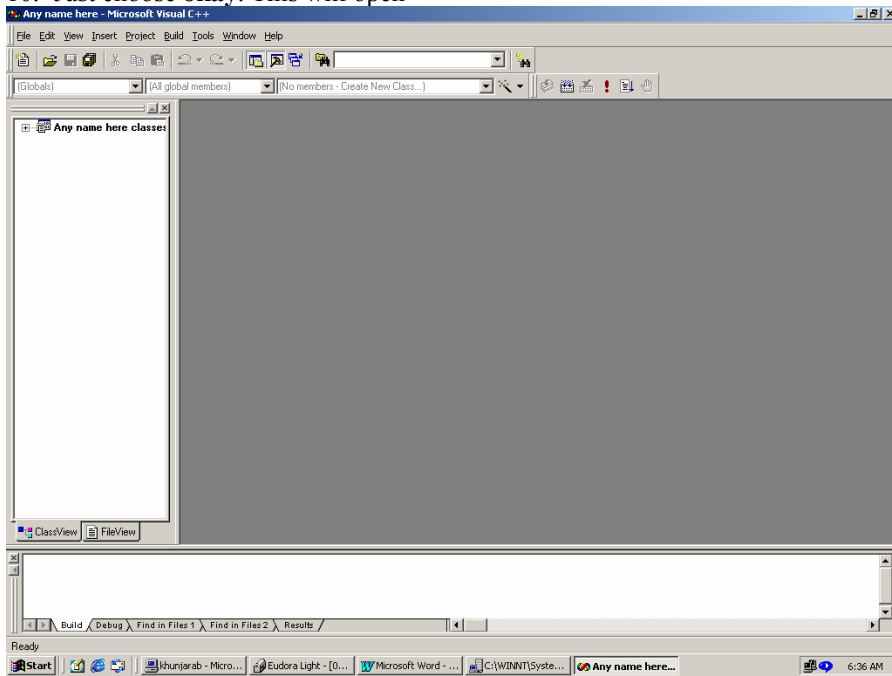

4. Make sure that the **'projects'** tab is selected.
5. Choose **Win32 Console Application** from the left pane.
6. In the location box select the location where you want your code to be saved (z:)
7. In the project name write any name that you wish.
8. Click ok, This will open another window.

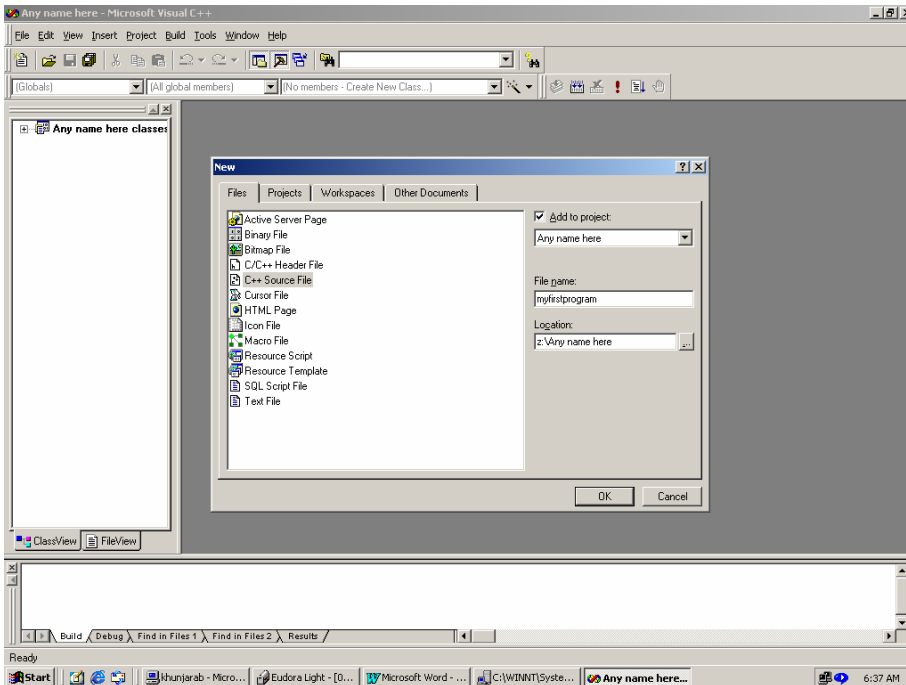

9. Select **'An empty Project'**, and chose Finish. This will open

10. Just choose **okay**. This will open

11. Again, go to **files/new**. Make sure that the **Files** tab is selected.

12. Select **C++ source file** and write anything in the File Name field.
13. Click okay. Now you are ready to go.
